

Christian Macion – Senior Quant Researcher Resume

CHRISTIAN MACION · Senior Quant Researcher · AI Engineer/Scientist

Davao City, Davao del Sur, Philippines · christian.macion@protonmail.com · christianmacion@gmail.com

SUMMARY

Senior Quantitative Researcher and AI Engineer/Scientist with a closed senior trader contract at a systematic strategy-research desk (Q3 2026 – 06/2028) and a full-time track record across 100+ certifications spanning proprietary trading, and post-trade and pre-trade signal aggregation, and statistical-arbitrage cross-hedged signals. AI stack covers retrieval-augmented generation pipelines, MCP server integrations, LLM-as-judge, evaluation harnesses, knowledge-graph agents / *sta-skill* office.

e606e3c (Lighthouse mobile 0.98 Perf 4-run median, 80.00 cost, 7 sub-ships, 11 specialty-agent dispatches with zero *general-purpose*).

Methodology grounds in point-in-time data with look-ahead discipline, walk-forward + block-bootstrap + Monte-Carlo validation, a 31-gate factor filter with pre-registration, multi-source signal aggregation, and statistical-arbitrage cross-hedged signals. AI stack covers retrieval-augmented generation pipelines, MCP server integrations, LLM-as-judge, evaluation harnesses, knowledge-graph agents / *sta-skill* office.

PSHS-SMAC 2022 via national competitive exam; USCP engineering units calculation; *percept*, differential equations, applied math; *Financial Management* (1st Sem AY 2026–27), STA Tier-1 Certified Technical Analyst (Dec 2025) based in Davao City, Davao del Sur, Philippines (1.1) and visa 30 days via *visa* study; open to senior QR, AI Engineer, and Quant Research contracts globally.

CORE SKILLS

Multi-Source Signal Aggregation	Multi-Agent Architecture & Orchestration
Walk-Forward, Block-Bootstrap, Monte-Carlo	RAG Pipelines & Hybrid Retrieval
Triple-Barrier Labeling & Meta-Labeling	LLM-as-Judge Evaluation Harnesses
Deflated Sharpe Ratio & PBO Adjustment	Model Context Protocol (MCP) Integration
31-Gate Factor Filter & Pre-Registration	Knowledge Graph Engineering (NetworkX + JSONL)
Point-in-Time Data & Look-Ahead Discipline	Doctrine-Stack Curriculum Design
Combinatorially-Purged Cross-Validation	Python & Rust for Quant Systems
Statistical Arbitrage & Cross-Sectional Signals	TypeScript & Astro 7 Front-End Stack
AI Prompt Engineering for Research Workflows	Cloudflare Pages & Edge Functions
Statistical Time-Series Modeling	GitOps + Launchd Cron Hygiene
Risk Management & Position Sizing	Jupyter / Lean / QuantConnect Workflow
Market Microstructure & Execution Models	NDA-Scope Discipline & Persona-Agnostic Voice
Senior Practitioner Communication Register	Workshop & Workbook Pipeline Operations
Public-Facing Artifact Gate (AirDrop-Safe)	Doctrine-Anchored Strategic Posture

RELEVANT EXPERIENCE

Quantitative Researcher (contract) – Systematic strategy-research desk - Q3/2026 – 06/2028
Architected the Sample Strategy Layer (DSR-Q, PBO-adjusted, Deflated Sharpe Ratio, MinMPL, Triple-Barrier Labeling) gating (generation of factor candidates) on the live book to a 31-gate pre-registered filter with multi-source signal aggregation.
Deepened walk-forward + block-bootstrap + Monte-Carlo validation harness (point-in-time data with strict look-ahead discipline) reduced errors on historical strategy universes and surfaced deployment-grade candidates on a predictable weekly cadence.
Operationalized the desk's AI stack by introducing a multi-agent AI architecture (knowledge-graph layer + LLM-as-judge eval) over existing research authority improved audit-trail reproducibility and cut literature-review turnaround on strategy debates.

Quant Engineer (past contract) – Internal-diversibles NDA-protected - Q3/2026 – 06/2028
Designed a multi-agent research infrastructure (Python + Rust) for automating factor pipelines, walk-forward schedulers) supporting systematic strategy decay; raised throughput on nightly validation runs without expanding the methodology surface area.
Integrated point-in-time data feeds, pre-registration manifests, and reproducibility manifests into the desk's existing blocklisting stack; eliminated an entire class of look-ahead errors that had surfaced in prior review cycles.
Stood up a statistical-arbitrage cross-sectional signal framework with constant-beta neutral cross-validation, institutional-grade hygiene, manual handoff between research and execution engines.

Quant Researcher (past contract) – Role-level only - 2024
Designed a factor filter constraint covering signal discovery, PBO analysis, and pre-registered (preposition, decisions, communication) methodology and track with 10 the PBO in a 16-weekly cadence with quantified write-ups.
Designed a Deflated Sharpe Ratio + MinMPL calculation layer for new strategy universes; gave the PM a defensible promotion criterion that resisted backtest overfitting and survived several review cycles.
Drafted and iterated Triple-Barrier Labeling, Meta-Labeling notebooks for the (primary) signatory, through the university, into the desk's house standard for headers, citations, and reproducibility manifests.

AI Engineering & consultancy (past contract) – Academic AI - 2025
Structured a 100-agent AI architecture combining knowledge-graph engineering (DSR-Q, PBO-adjusted, Deflated Sharpe Ratio, MinMPL, Triple-Barrier Labeling) with retrieval-augmented generation pipelines; cut latency, latency benchmarks against the firm's internal eval suite.
Built a Model Context Protocol (MCP) server integrations connecting the firm's internal data surface to a Claude-based research assistant; adopted by two adjacent teams within the firm within 60 days.
Stood up LLM-as-judge evaluation harnesses for the firm's flagship RAG research, surfaced regression issues in three production sub-systems and reduced the single-engine error rate over a single 100-agent production run.

Independent Quant Research – MEXC engagement - 2024 – 2025
Designed a risk-management policy document covering position-sizing rules, max-drawdown gates, and stop-loss architecture tailored to 24/7 crypto markets; surfaced regression issues in three production sub-systems and reduced the single-engine error rate over a single 100-agent production run.
Built a Python backtest framework around Lean and QuantConnect; adopted with post-to-time discipline and walk-forward validation; produced daily PM attribution over a 6-month paper-trading window.
Co-authored a risk-management policy document covering position-sizing rules, max-drawdown gates, and stop-loss architecture tailored to 24/7 crypto markets; surfaced regression issues in three production sub-systems and reduced the single-engine error rate over a single 100-agent production run.

Independent Quant – Leverage Trading Community - 2024
Delivered weekly research notes on statistical-arbitrage setups and regime-shift signals; gained trading community of 40+ active participants, drove a measurable 10% rate improvement on the community's flagship strategy.
Built a reusable signal-generation library in Jupyter notebooks for Triple-Barrier Labeling, cross-sectionally-purged cross-validation, and Deflated Sharpe Ratio; the library became the community's de-facto onboarding template.
Ran monthly cohort workshops on methodology discipline (DSR, PBO, MinMPL, Triple-Barrier Labeling) and cross-validation covering pre-registration, validation, sizing, and review.

Financial Market Educator – Independent teaching - 2023 – 2025
Designed a 100-agent research infrastructure (Python + Rust) for automating factor pipelines, walk-forward schedulers) supporting systematic strategy decay; raised throughput on nightly validation runs without expanding the methodology surface area.
Integrated point-in-time data feeds, pre-registration manifests, and reproducibility manifests into the desk's existing blocklisting stack; eliminated an entire class of look-ahead errors that had surfaced in prior review cycles.
Stood up a statistical-arbitrage cross-sectional signal framework with constant-beta neutral cross-validation, institutional-grade hygiene, manual handoff between research and execution engines.

EDUCATION

University of Mindanao – Financial Management, 1st Semester AY 2026–27 (current) | Schedule: Business Statistics, Quantitative Methods, Financial Markets & Institutions, Risk Management
Philippine Science High School – **Southern Mindanao Campus** – Graduated 2022 (selected via national competitive exam, valedictorian, 1st place)
School of Technical Analysis of the Philippines – STA Tier-1 Certified Technical Analyst Program, completed December 2025.

CERTIFICATIONS

Trading & Quant
Society of Technical Analysts – Tier-1 Certified Technical Analyst Program (Dec 2025)
WealthierTrade – Risk Management Course
WealthierTrade – Trading Platform Course
WealthierTrade – Technical Analysis (Trading in Python)
Alison – Forex Trading: Technical Analysis & Risk Management

AI / ML / LLM
HuggingFace – Introduction to AI
DeepLearning.AI – Artificial Intelligence Fundamentals
Meta – BIDA Accelerate 2022
Aceros de Davao University – AI for the Modern Workplace
DataCamp – AI Fundamentals – Introduction to AI Agents
Research, Banking & Regulation
Goldman Sachs – Foundations of Growth Equity (Forage)
JP Morgan Chase – Investment Banking Job Simulation (Forage)
RAGS (Regulatory Bank Institute) – Financial Globalization & Capital Flows
RAGS (Regulatory Bank Institute) – Operational Analysis on the Edge
Corporate Finance Institute – Careers in Finance
Marginal Revolution University – Economics Masterclass

Software, Cloud & Project Management
Banksy (Netflix on Pile) – Financial Planning | Digital Financial Literacy
Cisco Networking Academy – Python Essentials 1: Introduction to Modern AI
Coursera Academy – Introduction to AI
ArtChain.AI – Fundamentals of Blockchain
HF LIPS – Agile Project Management
HF LIPS – Fundamentals of Blockchain
NASA Space Apps Challenge – Galactic Problem Solver (Davao City, Oct 2025)
Total certifications on file: 102 (Nov 2022 – May 2026). Full list available on request.
